

RISHI LOKESH

rishilokesh25@gmail.com
248-757-7067

SKILLS

C++; Python; Java; JavaScript (TypeScript); Svelte; Firebase; Linux; SQL; C; C; HTML; CSS; Git; AWS; NeoVim; Serverless Architecture; Arduino; Computer-Aided Design (CAD); Failure Mode and Effects Analysis (FMEA); Risk Management; LaTeX; Machine Learning; Natural Language Processing (NLP); Data Analytics; Web Scraping; Perceptrons; Linear Regression; Decision Trees; Cloud Computing; Microcontroller Programming; Robotics; Educational Technology; API Development; Version Control; Continuous Integration; Agile Methodologies; UI/UX Design

EDUCATION

University of Michigan College of Engineering, Ann Arbor, MI Est. Graduation 2028

- Working on BS in Computer Science Engineering and Minor in Physics

International Academy, Troy, MI 2021-2025

- Graduated Summa Cum Laude through the rigorous International Baccalaureate program
- Submitted papers on the use of Graph Theory to optimize electrical grids and researched the effect of propeller pitch against thrust
- Scored a 1570 on my SAT and was a National Merit Semi-finalist

WORK EXPERIENCE

Argo Print, Founder/Developer <https://print.troyargonauts.org/> 2022-2025

- Saved over 10,000 dollars for local robotics teams and students by providing 3D printing services
- Maintained and operated 17 donated 3D Printers using Kubernetes, Linux, and custom software
- Worked with GreenGate3D and PolarFilament and ran machine learning analysis to reduce overhead and plastic waste

Chick-Fil-a, Team Member 2025

- Provided fun, fast service to customers in a high pressure environment
- Achieved a 100% customer satisfaction rating

OTHER EXPERIENCE

FRC Robotics Team 8728, Captain 2021-2025

- Taught computer-aided design, java programming, and robot design to lead my team to making 150 lbs robots to compete with
- Worked on strategy operations to optimize production through risk analysis and failure mode analysis
- Ran data analytics against opposing teams to optimize game strategy
- Held in-person and virtual seminars on computer vision and good coding practices, reaching over 2,000 people

To Teach A Monkey - Education through Technology, Founder 2023-Present

- Created an International Baccalaureate Learning Management System with AI integrations
- Used Natural Language Processing along side ML to create a physics problem solver in Python

PROJECTS

Algorithmic Trading Server, 2025

- Multithreaded C++ server designed for forex and stock trading
- Used perceptrons, numpy, linear regression, web scraping, decision trees, and risk analysis to generate strategies
- Implemented strategies in a live trading algorithm

Newsprint, 2025

- Serverless news feed created using AWS, Firebase, and Svelte to provide nonecho chamber recommendations.
- Used Natural Language Processing alongside a web scraper to find news articles and sort using a machine learning algorithm.

Easyduino, 2024

- Custom microcontroller designed to teach kids mechanical, electrical, and computer science engineering concepts
- Wrote custom C code to integrate with the Blocklyduino web interface
