

RISHI LOKESH

rishilokesh25@gmail.com
248-757-7067

SKILLS

C++; Python; Java; Javascript (Typescript); Svelte; Firebase; Linux; SQL; C; C; HTML; CSS; Git; AWS; NeoVim; Serverless Architecture; Arduino; Computer Aided Design; Failure Mode Error Analysis; Risk Analysis; LaTeX;

EDUCATION

University of Michigan College of Engineering, Ann Arbor, MI Est. Graduation 2028

- Pursuing a Bachelor of Science in Computer Science Engineering with a Minor in Physics

International Academy, Troy, MI 2021-2025

- Graduated Summa Cum Laude through the rigorous International Baccalaureate program
- Submitted research papers on the use of Graph Theory to optimize electrical grids and studied the impact of propeller pitch on thrust
- Achieved a 1570 on the SAT and was recognized as a National Merit Semi-finalist

WORK EXPERIENCE

Argo Print, Founder/Developer <https://print.troyargonauts.org/> 2022-2025

- Saved over \$10,000 for local robotics teams and students by providing 3D printing services
- Managed and operated 17 donated 3D printers using Kubernetes, Linux, and custom automation software
- Collaborated with GreenGate3D and PolarFilament, implementing machine learning analysis to reduce overhead costs and plastic waste

Chick-Fil-A, Team Member 2025

- Delivered efficient, friendly service to customers in a fast-paced environment
- Maintained a 100% customer satisfaction rating

OTHER EXPERIENCE

FRC Robotics Team 8728, Captain 2021-2025

- Led CAD design, Java programming, and robot construction, guiding the team to build 150 lb robots for competition
- Developed strategic operations through risk and failure mode analysis to optimize production
- Analyzed data against competing teams to refine game strategies
- Conducted seminars on computer vision and coding best practices, reaching over 2,000 participants

To Teach A Monkey - Education through Technology, Founder 2023-Present

- Developed an IB-focused Learning Management System integrated with AI
- Applied Natural Language Processing and Machine Learning to create a physics problem-solving tool in Python

PROJECTS

Algorithmic Trading Server, 2025

- Designed a multithreaded C++ server for forex and stock trading
- Utilized perceptrons, numpy, linear regression, web scraping, decision trees, and risk analysis to generate trading strategies
- Deployed strategies in a live trading environment

Newsprint, 2025

- Created a serverless news feed using AWS, Firebase, and Svelte to promote diverse news recommendations
- Employed Natural Language Processing and web scraping to gather and classify news articles with machine learning algorithms

Easyduino, 2024

- Developed a custom microcontroller to teach mechanical, electrical, and computer science concepts to children
- Programmed in C to integrate with the Blocklyduino web interface
